

Grading key for projects in the class "Advanced Python for NLP"

Repository	
1. <i>Structure</i> - Readme.md - Informative folder and file names - Clear language, good grammar and spelling	10 points
2. <i>Contents</i> - Code is well-commented - Every module does its job correctly - The main entrypoint to the project is clear and works - Script to access/filter data is included and works correctly - Running the code according to the instructions in readme.md leads to the expected results	30 points
Total points for the Repository	40 points

Report	
1. <i>Structure</i> - Clear language, good grammar and spelling - Report is structured appropriately and it's clear which section covers which aspects of the project - Appropriate citations	10 points
2. <i>Contents</i> - The goal of the project is well-defined, and the scope of the project is appropriate for the class - Appropriate data and tools are being used, and cited correctly - The implementation is well-suited to answer the research questions - Each module in the project is described sufficiently, and each module's role in the pipeline is clear - Quantitative analysis is sufficiently detailed and correct - Qualitative analysis is sufficiently detailed and correct - Report includes appropriate reflection on challenges and open issues	30 points
Total points for the Report	40 points

Oral presentation	
- Presentation is easy to follow for peers - Presentation is concise and describes the most relevant aspects of the project - Presentation takes roughly 15+10 minutes (10 minutes are for discussion) - Presentation points out contributions from all group members	20 points
Total points for the Presentation	20 points

Total points for the whole project: 100 points

Grade scale

Points	Grade
100-94	1.0
93.5-87	1.3
86.5-81	1.7
80.5-77	2.0
76.5-73	2.3
72.5-68	2.7
67.5-64	3.0
63.5-58	3.3
57.5-54	3.7
53.5-50	4.0
49.5-0	exam failed (5.0)
